

## HUMAN ECOLOGY EDUCATION FOR LIFE RESILIENCE:

Human Ecology is the study of the changing integrated environments that each person and each community must understand and function within to achieve well being. It is finding physical and psychosocial human wholeness and self-determination within complex social systems as they become more resource constrained, urban oriented and technological.

## HUMAN ECOLOGY EDUCATION IS:

- Age-related and culturally specific, progressing through four education levels as determined by culture and location Grades 1-5; 6-9; 10-12; 13-16.
- Each level must address each environment as age relevancy progresses
- Each level requires both lecture and laboratory learning experiences.
- Each level should be mandatory for graduation.
